

Have you considered offering a virtual work placement to young people?

Unfortunately no, we do not have a laptop they can use!

PTS may be able to provide the learner with a laptop and internet access

We do not know how to support a learner from home!

PTS can support a learner to work from home while on a virtual work placement with you

We are currently working successfully with businesses in Gloucestershire, in providing support with virtual and remote working placements.

Although it may seem a challenge to modernise the approach to work, many businesses have successfully embraced remote working, with some making it a permanent change!

As this year has brought new challenges for businesses and our young people, we are working to reduce barriers to employment, so a virtual and digital work placement may be the solution. This offers a perfect opportunity for **data entry, administration, ICT services and charity projects.**

Maybe now is the time to consider a virtual work placement to support your business

For more information please contact Ewen Saunders on **01452 886 888** or ewens@trainandrecruit.com to discuss how your business can offer a valuable work placement from home or remotely for our learners.
